# All pass  filter:

It can be described as  main concepts which are:

1-Hosam mostafa:

If the signal's frequency exists in the range ,which is supported by my negative produced by Hosam mostafa underfeed by this signal ,and underfeed by the rest of the system  at the same time,then this frequency,and this signal will pass,or if not Hosam mostafa will produce my ground ,which will contribute with the rest of the system, with my drawing of speech.

2-my delta:

If the incoming signal's frequency contributes,and exists in the range of my negative produced by my

delta ,at this system,with its condition,then this signal will pass , or if not the rest of operation of this system will be continued,and the all operations of the whole system.

3- Dealing with and eliminating obsession:

If the incoming signal's frequency intersects,with my cell&my section,and with  Dealing with and eliminating obsession in the rang of producing one ,or more of my negative, then this frequency will pass, or

If not the rest of operation  of Dealing with and eliminating obsession will continue.

4-Sciences&my sciences:

If the incoming signal's frequency is contained in the range of frequencies of my negative

produced by sciences&my sciences with my drawing of speech this frequency will pass or the rest of the operation of my drawing of speech will continue.

5- A ring in a flute:

If the incoming signal's frequency is contained in the range of frequency of the my negative produced by the ring in a flute

Underfeed with this signal ,which is intersected with Hosam mostafa underfeed with this signal at the same time ,then this signal will pass ,or if not the rest of operations of ring in a flute ,will be continued.

6- The daption,and the conditioning:

If the incoming signal's frequency is contained in the range of my negative produced by

Convergence, renunciation or containment between The daption,and the conditioning then this frequency will pass,or if not this signal will be eliminated  in the rest of the system.
